

20th Dewulf-potato harvester for Geert Vansteelant

Dewulf, specialist in harvesting technology of potatoes and carrots, give the key of the 20th Dewulf harvester for this season, to the proud owner, Geert Vansteelant. Geert began in 1997 with contract work to harvest potatoes. Today, he still relies on the harvesting technology from Dewulf.

It is clear that Geert has the Dewulf-red in his blood. With the introduction of the new generation of the R3060, Geert was immediately impressed by the new design and the improved ergonomics. For him, the R3060 is the top of 2-row self-propelled potato harvesters. Today, the company Vansteelant has two R3060's and two 4 row Kwatro's in its fleet. Geert has 3 permanent drivers that are harvesting for individuals and traders. They harvest for Mydibel, Decancq, ...

Through demand from his customers, Geert will also harvest industry carrots for the first time with his new R3060. He also purchased a Zuidberg-track for this season so he can be sure he can harvest in wet conditions. From this investment, he leaves nothing to chance, quality and productivity go hand in hand. Another additional advantage is that Dewulf are still a family run business. This ensures that the company always have a listening ear for specific requests or desires. Geert has seen Dewulf evolve over the years to become a world player. As well as the introduction of more innovative machines, the service has also improved a lot. Through this, Geert is able to count on the expertise of the Dewulf service support, this season and all future seasons.
